OUR MISSION

Our Mission is to help customers use technology to make their work easier and safer. We do this by streamlining communications, monitoring assets, automating processes and providing real-time business insights.

WHO ARE WE ?

We are a privately owned, Australian Business, established in 2011 with over a decade of experience in both Push-to-talk and traditional Two-way radio.

We collaborate with our customers to solve real business problems. We've built an Internet of Things (IoT) platform that provides real-time fleet tracking and asset management as well as a flexible Mobile Application that supports digitisation and data collection for field processes and lone worker safety.

The IMPULSE Wireless team has grown over time with offices in Sydney and Melbourne.

We serve a diverse industry clientele including Government, Construction, Logistics, Transport (Road, Tunnel, Bus, Taxi, Light Rail, Ferry, Community, Patient), Education, and Events.

WHAT WE DO

PUSH TO TALK

Connect your team instantly and securely from anywhere. One-to-one or one-to-many through a button press. Emergency calling priority, messaging and instant location. Dispatch and call bank queuing available. Enhanced GPS enables you to track and replay fleet movements.

LONE WORKER SAFETY AND COMPLIANCE

Lone Worker empowers remote work. Impact detection and automatic duress (incl. false positive checks) along with communications, open mike duress and location services help keep employees safe and employers compliant to their obligations under the Work Health and Safety Act 2011 and OH&S Act 2004.

FLEET MANAGEMENT

Fleet management provides peace of mind, compliance and operational awareness with real-time and historical reporting across all your radios, vehicles and connected assets. Key features are Vehicle Tracking and Route Monitoring, Driver behaviour, and Telematics.

INTERNET OF THINGS

You may have assets such as trailers, industrial equipment, warehouses, fridges, doors, sensors etc. These assets can be monitored for real-time status, data can be collected, and reporting automated for a wide variety of assets.
